Demonstration of Proposed Features

Date	13 JULY 2026
Team ID	XXXX
Project Name	Comprehensive measure of well-being
Maximum Marks	1 Mark

1. Demonstration of Proposed Features Matrix

This tracks the exact implementation status of your core modules, architectural choices, and security setups.

S. No	Feature Name	Description	Status	Demonstrated (Yes / No)	Remarks
1	Predictor Engine	Multi-variable regression model parsing real-time input metrics to deliver instant continuous HDI projections.	Implemented	Yes	Operates fully via singleshot JSON payloads passed to the /predict backend endpoint.
2	Scenario Simulator	Comparative engine running volatile "whatif" policy modifications against a baseline indicator set.	Implemented	Yes	Computes delta variations and percentage shifts side by side in a single request.
3	Input Boundary Clamping	Backend input data verification layer checking parameters against realistic socioeconomic ranges to prevent system errors.	Implemented	Yes	Enforces physical constraints (e.g., clamping health index bounds between 0 and 100) automatically.
4	Feature Analysis Deck	Structural layout exposing the regression model's learned coefficients and intercept configurations.	Implemented	Yes	Successfully outputs linear weight arrays dynamically to the frontend dashboard view.

S. No	Feature Name	Description	Status	Demonstrated (Yes / No)	Remarks
5	Glassmorphic Single-Page UI	A responsive dashboard layout utilizing blurred background layers, modern typography, and clean numeric focus.	Implemented	Yes	Intercepts traditional page reloads through non-blocking asynchronous Fetch API processing.
6	Ngrok Public Edge Tunneling	Secure remote runtime deployment strategy bridging the local Flask container directly to a public evaluator URL.	Implemented	Yes	Fully automated via a run_public.py wrapper, allowing friction-free testing for remote evaluators.

2. Feature Implementation Summary

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
